Log Linear Analysis for an A x B x C Classification Table

The three-way classification table can result in a number of linear models to describe the log of the observed frequencies as a function of row, column, slice, two-way interactions and the three-way interaction. When you select this option you see the dialogue box shown below. Notice that the option is given for entering data directly in the box if preferred. We will use the ABCLogLinData.LAZ file to demonstrate.

Log-Linear Analysis of a Three Dimension Table
